#### Part III DETAILED ACTION

#### Notice to Applicant(s)

1. This application has been examined. Claims 1-16, 18-21 and 27-34 are pending.

### Information Disclosure Statement

2. The references listed in the Information Disclosure Statement dated 7/12/01 have been considered by the Examiner and is attached to this Office Action.

#### Claim Objections

3. There is no claim 17 in this application. Appropriate correction is required.

### Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.
- 5. Claims 1, 3, 4, 5, 6, 7, 10, 12, 13, 14, 15, 16, 18, 20, 21, 27, 31, 32, 33, and 34 are rejected under 35 U.S.C. 102(e) as being anticipated by Notredame et. al. (hereinafter referred to as Notredame) (U. S. 6,049,390).

Art Unit: 2626

With respect to **claims 1, 10, and 20**, Notredame discloses an imaging method for combining first and second raster data (column 13, lines 48-53) comprising receiving at a print drive (which reads on block 1003, figure 10) from at least one raster image processor (RIP) (1009) the first data of an image processed by the RIP (column 13, lines 48-53), the print drive (1003) comprising a job control system (110) for receiving, storing, digitally combining, and outputting the raster data (column 14, lines 33-52 and column 19, lines 15-32), and a user interface (120) for directing operation of the job control system by an operator (column 15, lines 5-10); receiving the second raster data (column 13, lines 48-53); selecting the first and second raster data (column 16, lines 13-21 and column 15, line 41 to column 16, line 1), and digitally combining by the print drive in response to direction by the user interface, the first and second raster data to form combined raster data (column 19, lines 15-32).

With respect to **claims 3 and 12**, Notredame discloses the step of combining includes masking (column 5, lines 53-65).

With regard to **claims 4 and 13**, Notredame discloses a color separation operation (column 10, lines 59-67).

With respect to **claims 5, 14 and 21**, Notredame discloses the destination device is a printer (column 8, lines 29-34).

With regard to claims 6, 15, 31, 32, and 34, Notredame discloses that the raster image processor comprises a page description language interpreter (column 1, lines 61-65).

Art Unit: 2626

With respect to **claims 7 and 16**, Notredame discloses that the second raster data has substantially the same resolution as the first raster data (column 6, lines 61-67).

With regard to **claim 18**, Notredame discloses the prepress printing system (1001) in electrical connection with the print drive input terminal (120) comprises a general purpose computer (1005 and column 9, lines 50-53) having image software for producing a first and second image file (column 9, line 50 to column 10, line 57) coded in a page description language (column 10, lines 34-42), wherein the print drive (1003) receives and converts the first and second files to raster data (column 10, lines 50-67 and column 14, lines 26-32).

With respect to **claim 27**, Notredame discloses a network interface (column 14, lines 53-61).

With regard to **claim 28**, Notredame discloses an output device (printer) in communication with the print drive output (column 14, lines 33-40).

With respect to **claim 33**, Notredame discloses an image server in communication with the RIP (column 14, lines 11-25).

## Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2626

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Notredame in view of Perowne (U. S. 5,555,475).

With respect to claim 8, Notredame differs from claim 8 in that he does not clearly disclose creating a first image file coded in a PDL; receiving by the RIP, the first image file; interpreting the first image file to produce first raster data; transmitting the first raster data; creating a second image file; receiving by the RIP, the second image file; interpreting the second image file to produce second raster data and transmitting the second raster data.

Perowne discloses creating a first image file coded in a PDL (which reads on the RIP is supplied with a page description file comprising text or graphics) (column 3, lines 44-48); receiving by the RIP, the first image file (column 4, lines 44-48); interpreting the first image file to produce first raster data (column 4, lines 48-53); transmitting the first raster data (column 4, lines 60-66); creating a second image file (which reads on the RIP is supplied with a page description file comprising text or graphics) (column 3, lines 44-48); receiving by the RIP, the second image file (column 4, lines 44-48); interpreting the second image file to produce second raster data (column 4, lines 48-53); transmitting the second raster data (column 4, lines 1-7). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame to create a first image file coded in a PDL; receive by the RIP, the first image file; interpret the first image file to produce first raster data; transmit the first raster data; create a second image file; receive by the RIP, the second image file; interpret the second image

Page 6

Application/Control Number: 09/903,846

Art Unit: 2626

file to produce second raster data and transmit the second raster data. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame by the teaching of Perowne in order to improve the raster image processing of the data.

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 2, 11, 29, 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Notredame in view of Patton (U. S. 4,395,116).

With respect to **claims 2 and 11**, Notredame differs from claims 2 and 11 in that he does not clearly disclose that the step of combining comprises doubleburning. Patton discloses a method for forming a composite image by double-burning (column 3, lines 55-58 and column 5, lines 23-36). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame wherein the step of combining comprises doubleburning. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame by the teaching of Patton in order to reduce the time, cost, and effort necessary to produce composite images as disclosed by Patton in lines 1-3 of the abstract.

Art Unit: 2626

Notredame also differs from **claims 29 and 30** in that he does not clearly disclose a platesetter. Patton discloses utilizing printing plates (column 5, lines 23-36). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame to use a platesetter. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame by the teaching of Patton in order to improve the printing process.

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Notredame in view of Heiney (U. S. 5,983,243).

With respect to **claim 19**, Notredame differs from claim 19 in that he does not clearly disclose a server for transmitting input files to the RIP. Heiney discloses a data processing system in which a server (40) receives input files (102) and transmits these files (102) to a RIP (110). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame wherein a server is used for transmitting input files to the RIP. It would have been obvious to one of ordinary skill in the art at the time of the invention to

Art Unit: 2626

have modified Notredame by the teaching of Heiney in order to maximize the presentation throughput of the printer.

- 12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 13. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Notredame in view of Perowne as applied to claim 8 above, and further in view of Heiney (U. S. 5,983,243).

With respect to **claim 9**, Notredame as modified differs from claim 9 in that he does not clearly disclose a server for transmitting input files to the RIP. Heiney discloses a data processing system in which a server (40) receives input files (102) and transmits these files (102) to a RIP (110). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame as modified wherein a server is used for transmitting input files to the RIP. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Notredame as modified by the teaching of Heiney in order to maximize the presentation throughput of the printer.
